Mohammed Sayed

Senior DevOps Engineer

mohammedsayed9607@gmail.com 07576945280 London, UK GitHub LinkedIn Tech Blog

Profile

Senior DevOps Engineer with 5+ years building and operating AWS and Azure platforms across Kubernetes, Terraform, CI/CD, security and observability. Technical owner of a company-wide AWS-to-Azure migration, modernising infrastructure as code with security and cost efficiency built in. Proven track record improving delivery speed, security coverage and production reliability across cross-functional engineering teams.

Skills

Containers & IaC: Docker, Kubernetes, Helm, Terraform

CI/CD & GitOps: GitHub Actions, ArgoCD, Jenkins

Networking: DNS, Subnets, WAF, Cloudflare, Route 53

Observability: Prometheus, Grafana, CloudWatch, Azure Monitor

Databases: RDS, MSSQL, PostgreSQL, MySQL, Redis

Security: SonarQube, Trivy, Checkov, Azure Key Vault, Parameter Store

Cloud: AWS: EKS, Lambda, API Gateway, RDS, MWAA, **Azure**: Azure Functions, Azure SQL, Front Door, Data Factory

Professional Experience

Senior DevOps Engineer, *Osprey Flight Solutions* 01/2025 – present

- Technical owner of the company-wide AWS-to-Azure migration: rebuilt infrastructure in modular Terraform, re-platformed 4 apps and delivered 7 new applications from the ground up.
- Cut AWS spend from £24k to £10k per month through rightsizing, log-stream cleanup and FinOps, whilst maintaing uptime and availability.
- Architected a multi-AZ Azure estate (App Services, Function Apps, Azure SQL, Front Door, Data Factory) supporting a phased, zero-disruption migration.
- Introduced CI/CD security scanning, standardising Checkov, Trivy and SonarQube across 100+ repositories, with secrets managed in Azure Key Vault and Parameter Store.
- Reduced CI/CD build times from 40 minutes to 10-15 minutes by re-engineering pipelines across the estate.
- Selected and rolled out the AppCheck pen-testing platform company-wide, owning the vendor evaluation and use case.
- Built serverless automation (Lambda, API Gateway, MWAA) and hardened reliability with CloudWatch and a tested DR/backup strategy, cutting MTTR by 40%.

DevOps Engineer, *Fivium* 01/2023 – 01/2025

- Managed the production Amazon EKS platform with Helm, cutting release times 25% through automated lifecycle, autoscaling and zero-downtime deploys.
- Rebuilt CI/CD on GitHub Actions, cutting deployment times from 1 hour to under 20 minutes and removing manual errors.
- Codified the AWS estate in Terraform (EKS, VPC, IAM, RDS), giving teams repeatable self-service environments and cutting setup time by 40%.
- Managed ingress, DNS and traffic across Cloudflare, AWS Route 53 and hosted zones for secure, highly available delivery.
- Built the platform's observability with Prometheus, Grafana and CloudWatch, improving incident detection and response.

DevOps Instructor, *CoderCo* 01/2024 – 05/2026

- Enabled 3,000+ students to build practical DevOps skills across Linux, Docker, Kubernetes, Terraform and CI/CD.
- Developed and led 50+ hands-on labs covering Docker, Kubernetes, Terraform, GitHub Actions, ArgoCD and Helm.
- Mentored junior engineers weekly, supporting practical project work and career progression.

DevOps Engineer, *eGain Corporation* 02/2020 – 12/2022

- Built and ran containerised environments on Docker and Amazon EKS, delivering reliable app and API releases across test and pre-production.
- Provisioned AWS infrastructure (EKS, RDS) as repeatable environments, cutting configuration drift and environment defects.
- Automated build, test and release pipelines with Jenkins, Python and Bash, removing manual effort and speeding up releases.
- Protected data integrity with automated state checks and RDS validation queries, catching issues before pre-production.
- Added Postman API testing and automated reporting to the pipeline, giving stakeholders continuous visibility of release quality.

Projects

Cloud-Native E-Commerce Platform on Amazon EKS, *9 Microservices · GitOps · Stateful Kubernetes · Full Observability*

- Architected and deployed a nine-service order platform on Amazon EKS (v1.33, 3 AZs) running real stateful workloads: PostgreSQL and Redis on StatefulSets with persistent EBS gp3 volumes, snapshots and tested restores.
- Built the entire platform as modular Terraform covering EKS with Karpenter node autoscaling, IRSA, EBS CSI and remote S3 state with locking, with every resource hand-owned and no upstream wrappers.
- Drove GitOps deployments with ArgoCD (App-of-Apps, Kustomize dev/prod overlays) and two OIDC-based CI/CD pipelines, with zero static AWS keys and images built and pushed to ECR by commit SHA.
- Fronted traffic with Traefik on an AWS NLB, cert-manager and Let's Encrypt TLS, and ExternalDNS managing Route 53; SQS with a dead-letter queue as the event bus.
- Delivered full observability with kube-prometheus-stack, per-service Grafana dashboards and meaningful alerts, proven resilient through live chaos drills that kill Postgres pods and watch the StatefulSet self-heal.

Scalable Kanban Deployment: Terraform & CI/CD on EKS

- Deployed scalable infrastructure on AWS EKS with Terraform, GitHub Actions and Docker.
- Optimised security and traffic management with Kubernetes, **ALB**, Route53, and automated SSL via Cloudflare.
- Managed Docker images with **Amazon ECR** for streamlined deployments and storage.

Automated "Threat Model" app

- Optimised infrastructure using modular Terraform, automating deployments with GitHub Actions, Docker and **AWS ECS** (Fargate), while securing services via Route 53, Cloudflare and SSL management.
- Streamlined traffic distribution with ALB and managed Docker images through Amazon ECR for efficient storage and retrieval.

Multi-Application Deployment with ArgoCD & Kubernetes

- Configured ArgoCD and Kubernetes for GitOps, enabling secure login and access to deployed apps.
- Applied RBAC and TLS for secure access, managing deployments with custom Ingress for protected connectivity.

Kubernetes CI/CD Pipeline with Real-Time Monitoring

- Created CI/CD pipeline with GitHub Actions, Docker, and EKS, automating builds and Kubernetes deployments.
- Integrated Docker image security scanning, Webhooks for real-time alerts, and Prometheus/Grafana for monitoring.

Education

Aerospace Engineering, *Brunel University*
